

MSafe Legal Aid — Complete App Summary

Dhara · AI Legal Assistant for Indian Citizens

Prepared for MSafe Solutions · © Callistus Moses · 2026-07-27

1. App Overview

MSafe Legal Aid (product name: Dhara) is a bilingual (22 Indian languages) AI legal assistant that helps Indian citizens understand the Bharatiya Nyaya Sanhita (BNS) and the Constitution. It supports voice input/output for non-literate users, streaming responses from Claude Sonnet 4.5, and offers a Pro tier that unlocks lawyer-consultation-style deep answers, drafts, action plans and escalation paths.

Brand Identity

Field	Value
Launcher name (Play Store, home screen)	MSafe Legal Aid
In-app AI persona / product name	Dhara
Company	MSafe Solutions
Copyright	© Callistus Moses
Android package / iOS bundle ID	com.msafesolutions.legalaid
Deep-link scheme	msafelegalaid://
Slug	msafe-legal-aid
Firebase project	msafelegalaid

2. Screens (12 total)

#	Route	Purpose	Key features
1	/	Auth gate	Redirects to login or main app based on JWT
2	/login	Login	Email + password
3	/signup	Signup	Email, password, name, phone, mandatory T&C; acceptance
4	/(tabs)/index — Ask	Main chat	Streaming Claude 4.5, mic (native STT), TTS, Basic/Pro toggle, sample counter, paywall modal
5	/(tabs)/rights	Rights guides	Police stop, arrest, FIR, women's safety, traffic, RTI
6	/(tabs)/history	Chat history	Past sessions, tap to reopen, delete
7	/(tabs)/settings	Settings	Language (22), model picker, Pro status, terms, logout, helplines
8	/session/[id]	Reopen old chat	Full message history for a past session

#	Route	Purpose	Key features
9	/upgrade	Pro checkout	Razorpay ₹50 + Stripe \$5 + payment-ID verify modal
10-12	Layouts + HTML host	Framework	_layout, tabs/_layout, +html

3. Backend API (24 endpoints)

Category	Endpoints
Auth	POST /auth/register · POST /auth/login · GET /auth/me · POST /auth/accept-terms
Chat	POST /chat/stream (SSE) · GET /chat/sessions · GET /chat/sessions/{id}/messages · DELETE /chat/sessions/{id}
Voice	POST /voice/transcribe · POST /voice/tts
Billing	POST /billing/checkout (Stripe) · POST /billing/verify · POST /webhooks/stripe · GET /billing/razorpay/config · POST /billing/razorpay/submit-payment-id · POST /webhooks/razorpay · GET /billing/pricing
Reference	GET /reference/languages · GET /reference/models · GET /reference/topics · GET /reference/topics/{id}
Legal	GET /legal/terms
Health	GET /health · GET /

4. Key Features Shipped

- JWT auth with mandatory Terms & Conditions acceptance + timestamp
- 22 Indian languages including Hindi, Bengali, Tamil, Telugu, Marathi, Urdu, Gujarati, Kannada, Malayalam, Odia, Punjabi, Assamese and English
- Streaming AI answers via Claude Sonnet 4.5 (Anthropic) — GPT-5.2 / Gemini 3 selectable
- On-device native STT (expo-speech-recognition) with auto-fallback to cloud Whisper
- Multilingual TTS via expo-speech
- Pro paywall — first 5 pro-mode queries free (samples), 6th requires payment
- Razorpay ₹50 (India) via razorpay.me hosted link + Payment-ID verification
- Stripe \$5 USD (International) — hosted checkout + webhook
- Non-dismissible legal disclaimer banner on every tab
- Rights knowledge tab (police stop, arrest, FIR, women's safety, traffic, RTI)
- Emergency helplines (112, 181, 15100, 1098)
- Chat history per session with delete
- Firebase-matched package name for future push notifications

5. Functionality Testing Checklist

Priority 1 — Core (test first, catch showstoppers)

- Signup with phone + T&C; → account created
- Login → JWT stored → lands on Ask tab

- Basic chat → streaming Claude response with BNS/Constitution citations → counter stays 0
- TTS speaker on AI reply → hear voice output
- Language switch (Settings → Language) to Hindi → replies + TTS in Hindi
- Non-dismissible disclaimer banner visible above tab bar on ALL 4 tabs
- Home-screen app icon shows 'MSafe Legal Aid'

Priority 2 — Pro payroll (critical revenue flow)

- Pro toggle OFF → basic suggestions + unlimited chats
- Pro toggle ON → Pro suggestions + '5 of 5 samples remaining' badge
- 5 Pro messages → each returns lawyer-style deep answer + counter decrements
- 6th Pro message → paywall modal with ₹50 / \$5 + Upgrade + Continue-in-Basic
- Tap Upgrade → routes to /upgrade screen

Priority 3 — Payments (test mode only)

- Razorpay: browser opens razorpay.me/@calviltech → complete ₹50 UPI → paste Payment ID → Pro activated
- Stripe: currently fails (sk_test_emergent placeholder) — replace with real Stripe key before test

Priority 4 — Voice (native STT only works in APK)

- APK: mic → speak Hindi → live partial transcript → release → message sent (on-device, zero cost)
- Web / Expo Go: mic → falls back to cloud Whisper (record → upload → transcript)

Priority 5 — Nice-to-have

- Rights tab → expand each category → see structured content
- History tab → past sessions → tap → old messages load
- Settings → Terms of Service → full legal text visible
- Settings → Logout → returns to login

6. Shareable Web URL Options

Option	URL you'd get	Setup effort	Verdict
Preview URL (works now)	https://dhara-constitution.preview.emergentagent.com	Zero — already live	Best for immediate sharing
Emergent Deploy (default)	https://msafe-legal-aid.emergent.host (approx)	1 click Publish → Deploy	Permanent + free redeploy
Subdomain (dhara.msafesolutions.com)	NOT SUPPORTED on Expo/mobile flow	N/A	Requires separate Full Stack Web App project
Path (msafesolutions.com/dhara)	NOT POSSIBLE via DNS	Your own web server + reverse proxy	Out of Emergent's control

7. Credit-Saving Suggestions

- Batch requests: send multiple asks in one message — saves ~40% credits by avoiding repeated context loads.
- Test in Preview first, always. Every fix + Publish + bug found = double cost. Preview is free.
- Redeploy is free. Batch code changes → single Redeploy → single APK rebuild.
- Skip full RAG for now (~200-400 credits). Harden the system prompt to refuse invented citations first (~5 credits) — often 'good enough'.
- Do NOT fork. Fork = fresh chat = re-pay to re-establish context. Stay in this project.
- Reuse payment flow. Don't add Cashfree/PhonePe/UPI QR until real users validate ■50 conversions.
- Screenshots > descriptions when reporting bugs — 1 tool call vs 3-4 debug calls.
- Consider disabling Stripe if all users are Indian. 1-line env-var change, saves user confusion.

8. Typical Credit Costs

Activity	Estimated cost
Summary / status check like this	2 – 4 credits
Quick fix / config change	1 – 3 credits
Reading testing_agent report	1 – 2 credits
Typical feature addition (e.g. Pro paywall)	15 – 25 credits
Big feature (RAG, region gate, i18n)	200 – 400 credits
Deploy	~1 credit (Redeploy is free)
APK / AAB build	Included in deploy tier
